

Océ Plan Center

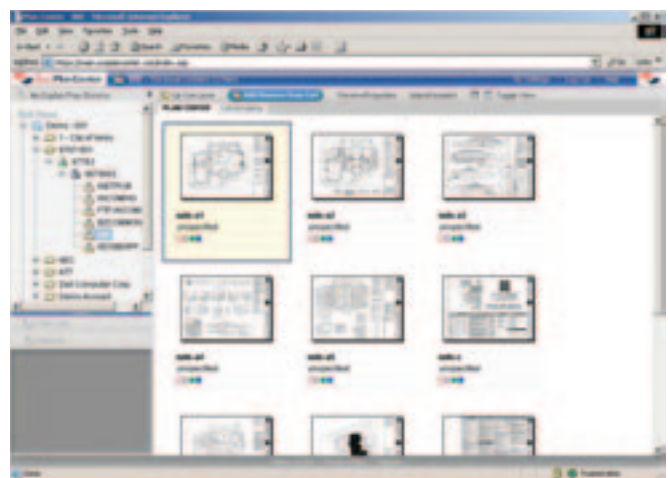

Get your plans online

Build better with improved document distribution

Visualize your own digital plan room where you can access your construction drawings from anywhere, anytime. Think of how easy it would be to distribute plan sets to team members or to invite a group of users to view and order prints directly—online. Imagine the amount of mistakes and rework that can be avoided when up-to-date documents are available online. See how centralization can reduce your project cycles. Now consider all the paperwork and delivery charges you eliminate. Great idea? It's more than that. The Océ Plan Center digital plan room system is an innovative way for architects, engineers, contractors, and owners to manage and distribute construction documents.

From desktop to print room

Create your online archive of print-ready drawings by partnering with a reprographic service provider who is an Océ Plan Center Authorized Host. Storing print-ready files online is ideal for managing and distributing finished drawing sets or archiving legacy documents with your reprographer. Publish documents to an Océ Plan Center digital plan room directly from AutoCAD® software or any Microsoft Windows®-compatible application. Then notify your project team of new revisions via e-mail. When you're ready, you can place online orders with your reprographer for print and delivery. LDF (Layered Document Format™) files ensure that prints are accurate, and the format's compact size speeds viewing and reduces online storage requirements.

Access your construction drawings from anywhere, anytime, and submit online orders to your reprographer for print and delivery.

The best protection

It's important to know that your drawings and documents are protected and available when you need them. That's why the Océ Plan Center system is supported by a highly secure infrastructure. Because online access is encrypted using Secure Sockets Layer (SSL) technology, you can rely on confidentiality and security as your project data is transmitted over the Internet. Data is protected by state-of-the-art safeguards, helping to ensure that it's there when you need it. And because access control is strictly monitored, you can rest assured that only those you invite into your plan room can access your plans.

Benefits

Online viewing and ordering

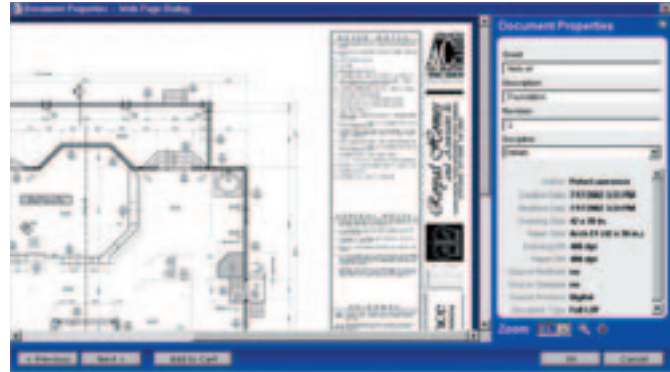

- View thumbnail images of print-ready drawing sets online. Double-click to see a full-screen WYSIWYP drawing preview. Use the fast, high quality zoom feature to focus in on details and title block information.
- Invite others by e-mail to view and order prints online from your secure digital plan room.
- Distribute revision information instantly to ensure that everyone is working from the most current drawing set to minimize mistakes.
- Order print sets from your reprographic host using an online work order form.
- A 3-step Work Order Creation Wizard enables you to save time by allowing the creation of a single order across multiple Issues and Projects. The wizard also simplifies the ordering process by allowing users to create print sets. The print set editor enables an order to contain sets of similar documents for use in constructing print packages with varying instructions.

Print-ready publishing to digital plan rooms

- Océ Publisher is an application which is used to batch process, prepare, preview and submit sets of native DWG, TIFF, PLT, VIC and other file types for publishing, printing or archiving. Océ Publisher can run as a standalone application or integrated within AutoCAD.
- Océ LDF Driver for Windows is a powerful Windows driver for publishing print-ready files from Windows applications such as Adobe Acrobat to an Océ Plan Center project.
- Océ LDF Driver for AutoCAD provides for quick, easy creation of archived print-ready files from within AutoCAD. When compared with the Océ Publisher, the AutoCAD Driver creates one file at a time, while the Océ Publisher is a batch file tool.

Manage user access

- Add users or delete them from specific directories within your digital plan room.
- The project manager who serves as the Océ Plan Center administrator has complete control over user access and permissions all the way down to the file-level.

Preview drawings in WYSIWYP form, and zoom in on drawing details and title block information. Page through multiple drawings and edit names and descriptions on the fly.

Secure architecture

- All online data transferred within Océ Plan Center is encrypted using SSL-technology, with up to 128-bit encryption.
- Océ employs state-of-the-art safeguards to protect your critical project data, including system redundancy, off-site data backup, and firewall protection.

Additional benefits

- Reduce mistakes and duplication by working with up-to-date information.
- Save on delivery charges by collaborating online.
- Speed up distribution among team members to reduce project cycle times.
- Send a link to a file, instead of a large e-mail attachment.

System requirements

- Microsoft Internet Explorer® 5.0 or higher (Javascript and Windows Scripting Host enabled).
- Internet connection (high speed recommended).

Océ is a leading supplier of digital document management and delivery technology. The company's solutions are based on Océ's advanced software applications that deliver documents and data over internal networks and the Internet to printing devices and archives—locally and around the world. Supporting the workflow solutions are Océ digital printers and scanners, considered the most reliable and productive in the world. Océ also offers a wide range of consulting and outsourcing solutions.
